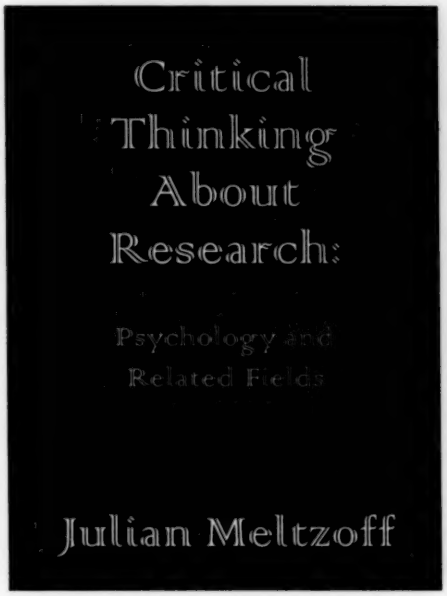
An Essential Resource for Teaching Research

Critical Thinking About Research:

Psychology and Related Fields

Julian Meltzoff



How should you teach students to detect flaws in research? To identify such defects in design, execution, analysis, and reporting, you must become an informed, interactive consumer of research. *Critical Thinking About Research* equips your students with the tools to identify flaws in others' research and reduce them to a minimum in their own work.

Part I discusses the complexities of research design, giving readers a solid grounding in the scientific method. Part II offers some enjoyable mental calisthenics in a series of realistic, but fictitious, journal articles. Clever and engagingly written, each one contains built-in flaws and is accompanied by a commentary that identifies the errors that were slipped in and may have slipped by the reader. Following the practical guidance and guided practice in this book, researchers at all levels can hone their evaluative skills. 1997. 300 pages.

Contents Include:

Critical Reading • Research Questions and Hypotheses • Research Strategies and Variables • The Sample Confounding Variables and Their Control Research Designs and Threats to Internal Validity Criteria and Criteria Measures • Data Analysis, Discussion, and Conclusions • Research Ethics ...Plus 16 practice articles.

VOLUME 84, SUBJECT INDEX III JANUARY–DECEMBER 1997

TRUSTED WORLDWIDE AS THE AUTHORITATIVE PRINTED REFERENCE IN PSYCHOLOGY

Now a single print product gives users access to chapter, book, and journal information from all areas of psychology and related disciplines. APA's *Psychological Abstracts (PA)* brings users nearly 3,000 journal abstracts every month and NOW includes book chapter and book information.* Both psychologists and librarians have reported that they want the convenience of having a single source for ALL of the information available from books, book chapters, and journals. That's why chapter and book summaries are included in the monthly issues of *PA*.**

PA gives your users an overview of research in psychology and related fields, sums up articles from over 1,300 English-language journals and over 1,500 books annually, shows everything that's new in a given specialty, and much more!

Don't miss out on psychology's richest resource on current literature! *PA* is priced at $1,359 per year for institutions. Well worth it for over 4,000 journal *and* book abstracts per month!

This Annual Subject Index, published in five volumes, consolidates more than 159,000 references to approximately 45,000 abstract records published in 12 monthly issues of *Psychological Abstracts* from January 1997 through December 1997. A companion work, the Annual Author Index, references these records by author and document title.

Index terms, selected from the *Thesaurus of Psychological Index Terms,* represent the literature covered for the periods indicated. Only terms assigned as major terms, reflecting the main focus of the article, appear in the printed subject index. (Terms assigned as minor do not appear in print but are available for online searching.) Subject matter content determines the specific terms used and, thus, not every thesaurus term will appear in every index. "See" and "See Also" references are present to direct the user to the preferred terminology or related areas of interest. Index phrases are alphabetically arranged under the appropriate index terms and represent a concise statement of the article's content or, when appropriate, identify the independent and dependent variables described in the material as well as the subject population. Style changes such as the increased use of abbreviations or the elimination of some hyphens may result in some inconsistencies and may affect the alphabetical order of phrases.
